PROFILE

Gameplay programmer with 3 years of Unreal Engine experience in C++ and Blueprints and a Computer Science background. I build gameplay systems, enemy AI and mechanics that are readable, tunable and fun to play against, and I have released six small games on itch.io under game jam deadlines. Also comfortable in Unity (C#) and Godot. Looking for Gameplay Programmer, Tools Developer or Software Engineer roles, in Amsterdam or remote.

SKILLS

Programming: C++, C#, GDScript, HLSL, Blueprints

Unreal Engine 5: Gameplay Framework, Enhanced Input, Animation Blueprints & Montages, UMG & Common UI, Behavior Trees, Blackboards, AI Perception, NavMesh, Chaos, Materials & Post-Process

Engines & tools: Unreal Engine 5 (3 years), Unity (1 year), Godot, Visual Studio, Git, Fork, Blender, Figma

Languages: Italian (native), English (professional)

PROJECTS

Third-Person Action RPG | UE5 · C++ · Solo — In development

- C++ character with Enhanced Input, camera setup and locomotion driven by Animation Blueprints.
- Melee combat: weapon equip, attack montages, trace-based hit detection, hit reactions and directional damage.
- Enemy AI in C++ (patrol, chase, attack) with perception and NavMesh; attribute component for health and stamina with UMG HUD.
- *Built alongside a UE5 C++ course and extended with my own systems.*

Rabbit Heist | UE5 · Blueprints · Solo — Mini Jam 181

- Stealth-action game: farmer AI built with Behavior Trees, Blackboards and custom tasks, services and decorators (patrol, investigate, chase).
- AI Perception (sight and hearing) with last-known-location search, so stealth feels fair and readable. Packaged within the jam deadline.

Biscuits Defence | UE5 · Blueprints · Solo — Brackeys Game Jam 2025.2

- Data-driven wave spawner with escalating difficulty, enemy behaviour, squash-and-stretch feedback with Timelines and a UMG HUD.

Painted Light & Post-Process Look Library | UE5.5 · HLSL · Materials — Personal R&D

- Painterly post-process with a Kuwahara paint filter written in HLSL, controlled by a few artist-friendly parameters.
- Four switchable styles (pixel art, halftone, ink, watercolor) on one shared base, swapped live through Blueprints.

One Copper | Godot · GDScript · Solo — Brackeys Game Jam 2026.2

- Narrative card game with resource-based card data and alibi-checking logic, exported to HTML5; added an onboarding tutorial after player feedback.

EXPERIENCE

Independent Game Developer | Self-employed — Aug 2024 – Present

- Gameplay systems in UE5 (C++ and Blueprints), six game jam releases and personal projects on AI, combat, rendering and procedural mechanics.

Playtester (Internship) | Station Studio

- Playtested in-development builds, reported and documented bugs, and gave structured feedback on gameplay and usability.

Freelance Playtester | Remote

- Playtesting and feedback reports for indie projects, including a puzzle game and a third-person shooter.

Process Specialist & Data Analyst | Logistics — Jul 2019 – Jul 2023

EDUCATION & CERTIFICATIONS

Event Horizon School of Game Development | Game Development, Programming Track — 2022 – 2025

Computer Science | University studies

Udemy: C++11 Features, Exception Handling and STL · Unreal Engine 5 C++ Programming: Action-RPG Open World Game · AAA Frontend UI/Menu in UE5 with C++ and Common UI · *In progress: Gameplay Ability System (GAS) in UE5*
